AB VILMA is Lithuanian manufacturer of electrical installation products with a leading position in the Baltic States. Our company offers a wide range of electrical installation goods which meet requirements of European standards, top quality of production, and are long-lasting: switches, sockets, telephone and computer jacks, speaker jacks, etc. Exceptional design of the products will create an exclusive and cosy interior for your home.

Our electrical installation goods are produced by Swiss automated assembly equipment, thereby ensuring the highest quality products. The use of automated equipment allows only identical components to be selected and used for production, and their precise verification guarantees that the product will work reliably and for a long time.

VILMA products undergo constant improvements and are regularly checked by our company's quality specialists. The constant growth from year to year in demand for our products is the result of unmitigated customer confidence in our products. Currently our products are sold not only in Lithuania, but also in Latvia, Estonia, Russia, Belarus, Ukraine, Georgia, Norway and Spain.

# USB

EXPRESS XP 500

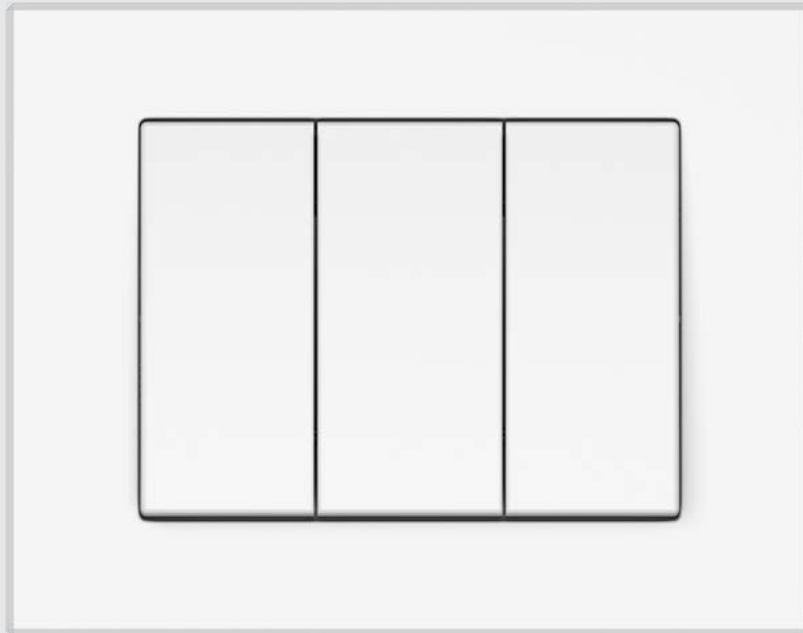

---

## New – stationary USB outlets of series **EXPRESS XP500**

More and more smart devices, whose operation is constantly required, are making their appearance in modern life and charging convenience is an integral part of comfortable life. Stationary USB outlets have been created for this purpose – they not only make charging of devices easier, but also help to keep the interior stylish and integral.

# LIGHT CONTROL

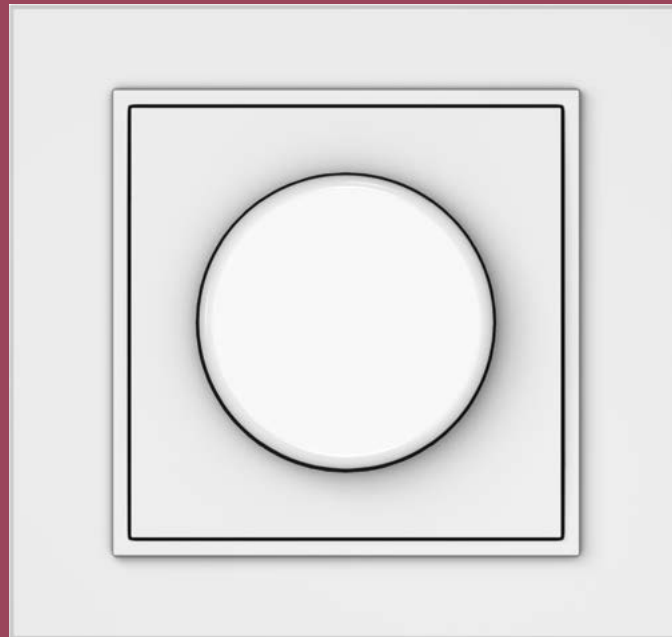

EXPRESS XP 500

Switching lights on and off at home, work, or public spaces, is simply part of our everyday life. Consequently, we are well aware of switches with one, two or three buttons, which control of one, two or three light sources. Sometimes, however, we do not imagine that the daily management of the light can be made even more convenient and more customised to each individual requirement.

If you need to turn a light on and off frequently and from multiple locations, a relay switch might be the perfect solution for you. It is ideal for stairwells, corridors or other larger spaces where just one control point proves inconvenient. Sometimes we want to control lights from different locations. One example would be the bedroom, where you would prefer to turn off the light from your bed. The ideal solution here is a relay switch that lets you turn the light on or off both on entering the room and also from two separate places at the bedside.

# DIMMERS

QUADRUN QR 1000

---

The intensity of light in the room depends not only on the time of day, but also on a person's mood or habits. The use of a dimmer lets you achieve the optimal solution for light control.

VILMA light dimmers work by pressing a round button, which can be turned for regulating the intensity of the light. For your convenience, when you turn off the dimmer then turn it on again, the light intensity remains at the last setting used. Our dimmer can also be used as an on/off switch. As diode light (LED) illumination becomes more popular, we recommend the use of VILMA LED dimmers, which enable you to regulate LED dimmable lightbulbs. You could also choose our standard dimmer, which is for use with heat lamps and halogen lamps. These products come in the series QUADRUN QR 1000, EXPRESS XP 500, LUXE LX 200, SPECTRUM SP 300 and STANDARD ST 150.

In order to create a safe and comfortable home environment, electrical installations must be closely in line with living conditions and needs. In certain home spaces such as bathrooms, due to the higher humidity in the room, there can be additional requirements for switches and sockets. VILMA IP44 protection class switches and sockets are additionally splash-resistant and can be installed in the right bathroom areas for you.

When choosing sockets, security is particularly important if there are children at home. Accidental contact with sockets can be prevented by having sockets with additional shutters, which open when the plug of an appliance is smoothly inserted into the slot.

# EVEN MORE SAFETY

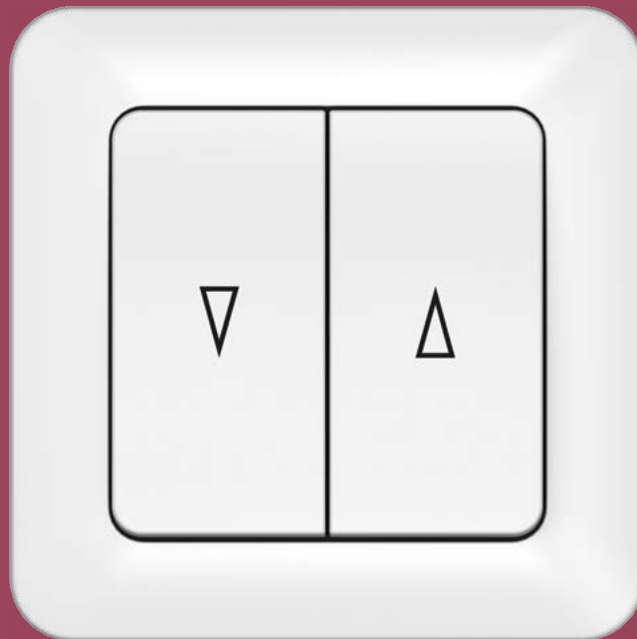

STANDARD ST 150

STANDARD ST 150

# BLIND SWITCH

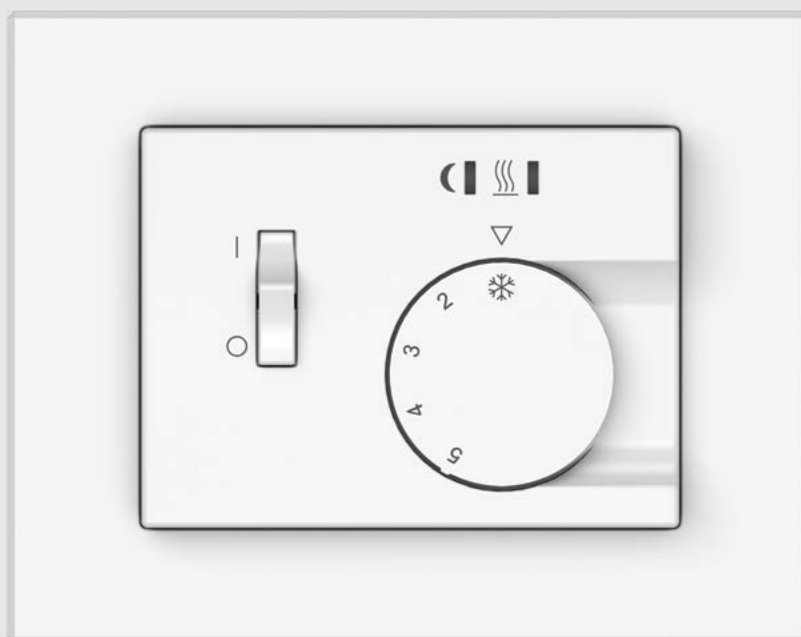

STYLE SL 250

---

As well as interior lighting, we offer you a comfortable and easy way to adjust the light entering from outside. With a VILMA blind switch you will be able to easily and comfortably manage both indoor and outdoor roller blinds or curtains, simply with the click of a button. In addition, it will be compatible with other VILMA switches operating in the house.

# ROOM AND FLOOR THERMOSTATS

EXPRESS XP 500

Each of us likes the house to be warm and cosy, and with VILMA products, it's simple. The VILMA room thermostat with an internal temperature sensor allows you to conveniently and effectively manage home heating. The desired temperature is maintained, because the thermostat turns the house's thermal management devices on or off when the room temperature drops or exceeds the set threshold.

For those who want a device to adjust the electric floor heating, we recommend you choose the VILMA floor thermostat. With a gentle turn of a regulating dial, you set the desired floor temperature, which is maintained by an external sensor in the floor. Both the room thermostat and the floor thermostat can operate in economy mode, automatically lowering the temperature at night or at other times of the day, saving heating and electricity costs. Both thermostats are easy to turn on or off from the switch on top of them, and their mode of operation is always displayed with indicator lights. You can choose our thermostats from series EXPRESS XP 500 and LUXE LX 200.

# DATA TRANSFER

EXPRESS XP 500

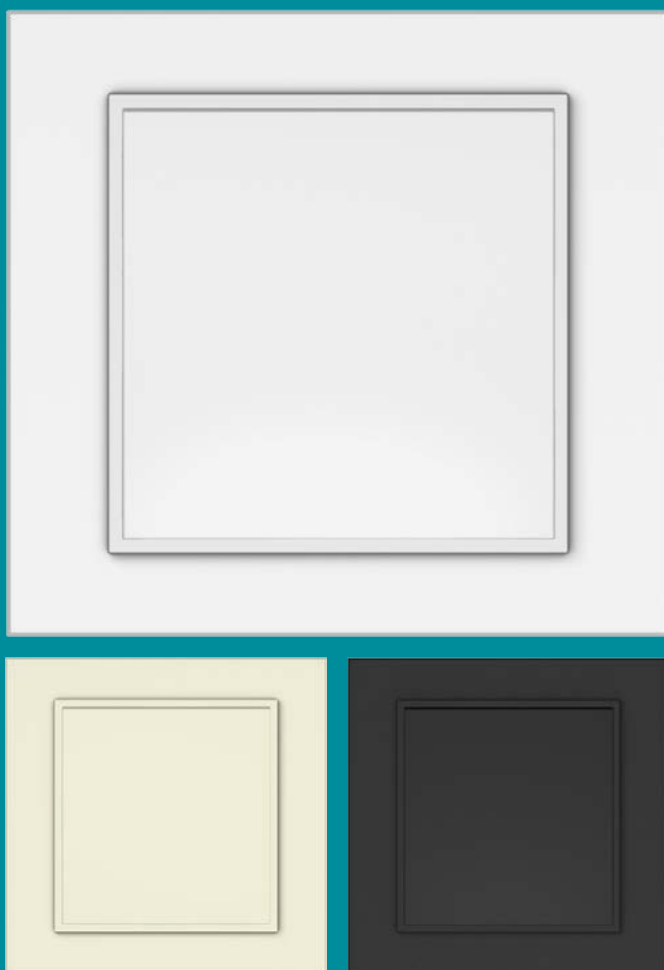

EXPRESS XP 500

Modern technology makes our lives more comfortable and vibrant. Television, computers or home sound systems are an inseparable part of daily life. Therefore, when planning the layout of a house, the need for connection points for computers, television or speakers is a priority.

Particularly useful are places to plug in USB or HDMI connections, so that data storage or data transfer devices can be used in a spot that is convenient for you.

# QUADRUM QR 1000

These are products of the latest series. The design of this series is modern, with particularly strict lines. The switch form is architecturally complete – of square shape, the frame is particularly thin and ideally blends with walls, integrating details of the interior.

## GLASS AND WOODEN FRAMES

Not only plastic, but also wooden and glass frames have been created for **QUADRUM QR 1000** products. This enables to make the interior design complete to the smallest detail. If you want to integrate a switch in the interior modernly, a white glass frame is ideal for this. It has a matte finish and subtly blends into the surroundings. Meanwhile, black glass products have a gloss finish and serve as an accent in the interior.

Wooden frames create the feeling of cosiness, naturalness in the interior design. They are made of real wood so they are really pleasant to touch. You can choose a whitened or natural color oak frame if your interior is in pastel colors, whereas a darkened oak color frame suits a more intensive, more sensuous interior.

These exceptional frames can be matched with **QUADRUM QR 1000** mechanisms of three colors, in this way making the uniqueness of your interior more prominent.

# EXPRESS XP 500

## GLASS, WOODEN AND STEEL FRAMES

EXPRESS XP 500 product line offers a wide selection of glass and wooden frames. Glass frames are made from hardened glass. The white and green frames have a matte finish to help them blend gently into the surroundings; the black glass product has a gloss finish which gives the product a distinctive elegance.

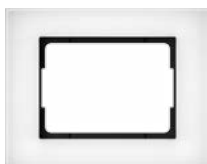

What makes the wooden frames so striking is their wide range of colours. You can choose the light tone of bleached oak, the more natural beech or oak colours, or the clear and darker shades of walnut, redwood or stained oak. The wooden frames are made from natural wood, making them durable and pleasant to touch.

All these frames can be matched to EXPRESS XP 500 mechanisms of six different colours, thereby creating a distinctive interior in your chosen space. Because of its distinctive elongated form, the frame is all-in-one, seamless, and it gives the product elegance and purity.

# STANDARD ST 150

---

**STANDARD ST 150** series is for those who want ergonomicity and functionality in the daily environment. The clear rectangular shape gives a feeling of strength and reliability, while the large selection of colours in this series allows the possibility to choose from either bright and contrasting colours, or pastel interiors.

# STANDARD ST 150

## TECHNICAL SPECIFICATION SHEET INTELLIGENT DIMMER DPI-01

DPI-01 dimmer switch is an intelligent programmable device, designed to regulate dimmable LED lighting, halogen lighting powered by an electronic transformer, incandescent lighting. The dimmer enables in a programmable way change of the minimum lighting setting and operating mode. You can change the operating mode only when the dimmer is working incorrectly, eg when the lighting is winking. The dimmer works in mode 2 by default.

The DPI-01 dimmer switch has overload and short-circuit protection. If an overload occurs, the dimmer switches off automatically.

### Change of the DPI-01 dimmer's minimum lighting setting:

Note: All programming activities should be performed smoothly one by one with a maximum of 3 seconds lag between each point. In case of the flickering effect of the light when it is darkened, the minimum brightness setting should be increased.

### Change the minimum lighting setting in accordance with the following points:

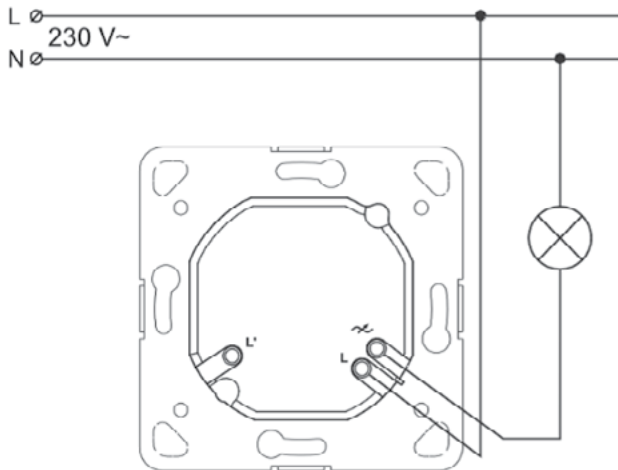

1. Turn on the dimmer and turn the knob to the MINIMUM position (turn the knob completely to the left).
2. Turn off the dimmer and run it again 3 times, leaving about a second between pressing: OFF - 1s - ON - 1s - OFF - 1s - ON - 1s - OFF - 1s - ON.
3. The light will start winking and then go off, which will mean, that the dimmer is in CONFIGURATION mode.
4. Within max 3 seconds from the moment when the light goes off turn the knob to the right until the lights turn on, then you can proceed to the minimum dimmer brightness selection, which you will be happy with. Leave the dimmer in this position. After 3 seconds, the dimmer will notice, that the minimum regulation has been set up. The light will shine once more brightly once less, which means, that the dimmer has returned to normal operation.

### Change of DPI-01 dimmer operation mode:

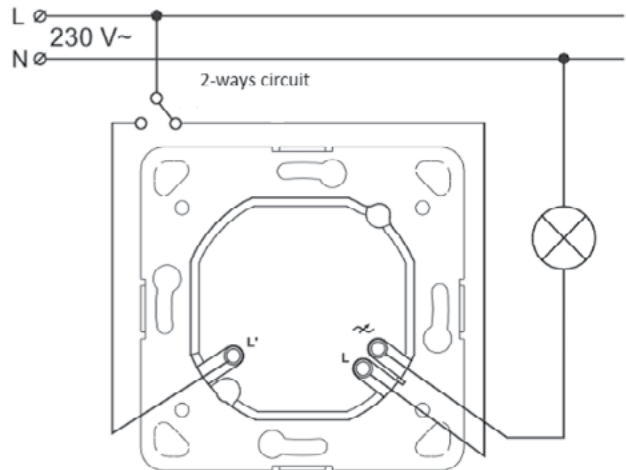

1. Turn on the dimmer and turn the knob to the MAXIMUM position (turn the knob completely to the right).
2. Turn off the dimmer and restart it 3 times, leaving about a second between pressing: OFF - 1s - ON - 1s - OFF - 1s - ON - 1s - OFF - 1s - ON - 1s.
3. The light winks a few times and then goes off, which will mean, that the dimmer is in CONFIGURATION mode.
4. To select MODE 1, turn the potentiometer to the MINIMUM position within 3 seconds and then back to the MAXIMUM position.
5. To select MODE 2, turn the potentiometer to the MINIMUM position within 3 seconds.
6. The amount of light brightness will indicate the mode in which the dimmer is currently working.
7. The device returns to normal operation.

**Connection and assembly method** Typical 1-way circuit connecting diagram 2-ways circuit connecting diagram.

Typical 1-way circuit connecting diagram

2-ways circuit connecting diagram

### Basic parameters:

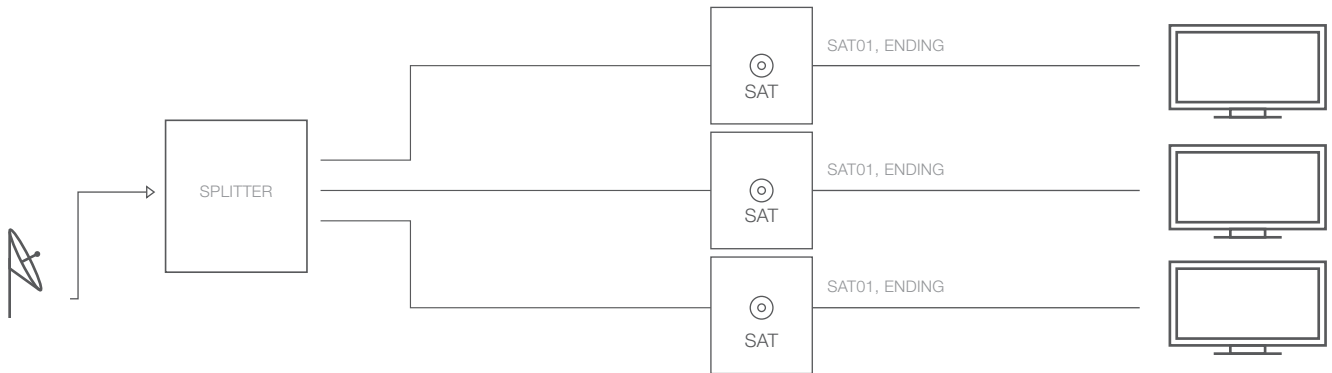

- Rated supply voltage: 230 VAC
- Supply voltage tolerance: -15 +10%
- Rated frequency: 50 Hz
- Lighting control: switch and adjustment on the potentiometer
- LED load power: 0 ÷ 100W, but max 10 dimmable LED bulbs
- The power of incandescent and halogen load: 10 ÷ 250W
- Note: DPI-01 dimmer does not work with a halogen load supplied by a magnetic transformer (eg a toroidal transformer)
- Weight: 0,120kg
- Number of connection terminals: 3
- Cross-section of connection cables: max 1mm<sup>2</sup>
- Mounting the casing: standard wall junction box Ø60 mm
- Protection degree: IP20
- Temperature range of work: from -20 °C to +45 °C
- Pollution degree: 2
- Dimensions: 70 x 70 x 31 mm
- Weight: 0,120 kg

The number of television sets that can be connected depends on the type of splitter chosen

The number of television sets that can be connected depends on the type of splitter chosen

## CONVENTIONAL SYMBOLS

	Number of items in a box		Product surface material: PC – polycarbonate, ABS – Acrylonitrile Butadiene Styrene
	Voltage, current, or frequency		Production by the order – orders are processed within 15 working days
	Product protection class		EXPRESS XP 500 items, marked with an asterisk, have a different mode of illumination – light emits from a small bulb in the key. In all other products, the light emanates from the gap between the key and the frame.

EAN code: the letters V and D denote differently packaged products. V (single unit) means the product is in the standard hanging package, suited for shopping centres or supermarkets. D (wholesale) means the product is placed in a separate bag. The number of frames in wholesale packages is coordinated separately, and packaging may vary.
